DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-14, 19, drawn to a fusion protein, classified in class 530, subclass 387.3.
 - II. Claims 15-18, drawn to polynucleotides, expression vectors, host cells, and method of expression, classified in class 536, subclass 23.1.
 - III. Claims 20-22, drawn to a method of treatment, classified in class 424, subclass 134.1.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I and II represent separate and distinct products which are made by materially different methods, and are used in materially different methods which have different modes of operation, different functions and different effects. The polynucleic acid of Group II and the fusion protein of Group I are all structurally and chemically different from each other. The polynucleotide is made by nucleic acid synthesis, while the fusion protein is made by chemical synthesis or chemical conjugation. Furthermore, the polynucleotide can be used for expression while the fusion protein can be used to purify the antigen, for example. The examination of all groups would require different searches in the U.S. Patent shoes and the scientific literature and would require the consideration of different patentability issues. Thus the inventions I and II are patentably distinct.

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the immunoglobulin fusion protein of Group I can be used in a materially different method such as to purify the antigen in addition to the materially different method of Group III.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and different classifications, restriction for examination purposes as indicated is proper.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(l).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Larry R. Helms, Ph.D., whose telephone number is (703) 306-5879.
